# **TECHNICAL DATA SHEET**

The Power Behind Performance

## **27DC105** Commercial Deep Cycle Battery

#### SPECIFICATIONS

Model Number	27DC105		
Part Number	1426		
Nominal Voltage	12 Volts		
Physical Characteristics	Length	12.63″	321 mm
	Width	6.75″	171 mm
	Height	9.38″	238 mm
	Weight	51 lbs	23 Kgs
Terminal Options	Standard		

#### **ELECTRICAL SPECIFICATIONS**

20 Hr	5.25	105 Ah
5 Hr	15.60	78 Ah
6 Hr	0.880	
100 Amp Rate	21 Minutes	
75 Amp Rate	31 Minutes	
50 Amp Rate	54 Minutes	
25 Amp Rate	140 Minutes	
80° F	27° C	7.6 mΩ
104° F	40° C	102%
80° F	27° C	100%
32° F	0° C	65%
	5 Hr 6 Hr 100 Amp Rate 75 Amp Rate 50 Amp Rate 25 Amp Rate 80° F 104° F 80° F	5 Hr 15.60   6 Hr 0.880   100 Amp Rate 21 Minutes   75 Amp Rate 31 Minutes   50 Amp Rate 54 Minutes   25 Amp Rate 140 Minutes   80° F 27° C   104° F 40° C   80° F 27° C

**C** rown Battery Manufacturing Company offers a complete lineup of high-performance and low-maintenance commercial deep cycle batteries produced in standard Battery Council International group profiles for voltage, electrical capacity and physical dimension. Crown Battery's innovative and proven deep cycle product design makes it the battery of choice for many tough commercial battery applications, including commercial floor care and aerial access equipment, electric vehicles, personnel carriers, material handling systems and renewable energy systems.

### **27DC105 Commercial Deep Cycle Battery**

Crown Battery Manufacturing's team of research and development engineers welcome the opportunity to discuss your technical requirements during the design and specification stage. To access this technical assistance, please contact

Crown Battery Manufacturing's Customer Service Department 800.487.2879 | sales@crownbattery.com | FAX 419.334.7124.

#### **Recommended Charge Profile:**

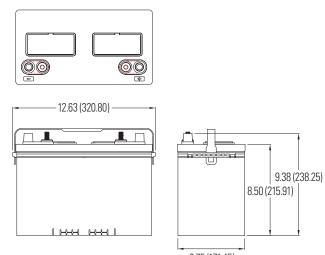

Following discharge, constant current charge the 27DC105 battery at 10 to 12 amperes until the battery on charge voltage measures between 2.37 and 2.40 volts per cell (14.22 – 14.4 volts).

The constant voltage charge phase begins after the gassing point (2.37 - 2.42 VPC) is achieved. During the constant voltage phase, the charger voltage limit is regulated to the gassing point of 2.37 - 2.42 volts per cell, while the input current is allowed to gradually fall off. When the input current drops to the finish rate setting of 4 amperes, the charging phase will change from constant voltage to a sustained 4 ampere constant current mode. The charging cycle will be terminated by a standard approved method of charger termination similar to dV/dt or 3.5 to 5 hours from the gassing point, with factors such as ambient temperature, battery condition and depth of discharge affecting the charge completion time.

The 27DC105 battery should receive a full recharge following the completion of each discharge, along with a monthly equalization service charge. During the equalization charge cycle the finish rate charge time is extended by 3 hours (6.5 to 8 hours from the gassing point).

The charge factor of the standard recharge should be equal to or greater than 1.07 (107%). The charge factor of the equalizing cycle should be equal to or greater than 1.15 (115%).

Please contact Crown Battery Manufacturing Company's engineering department with any questions regarding this charge profile specification.

6.75 (171.45)
